Hi Jeremy

We use the back boundary of the beach- e.g. the bluff toe, perennial vegetation line, or primary foredune toe. We will score wrack that is cast above that boundary too but note it is above the long term intertidal boundary. Spring can be tricky since there are new veg recruits but we go to the older vegetation and score the new recruits.

Hi Jenny,

When you do your wrack surveys along the transects that go perpendicular to shoreline, how do you determine where to place the start of the transect?

peace,
jeremy
